

Supervisor Systems Releases FS»Touch

Feed Supervisor[®] Software releases NEW Touch Screen— Precision Feeding Is Now A Reality

The **FS»Touch** is designed to meet the needs of both the manager level feeder and the fully supervised feeder. Manager level feeders have the power of Feed supervisor Software on the go. Change cow numbers, adjust percent dry matter, view previous days feeding,

“Touch screen technology provides unlimited functionality with the FS»Touch.”

and record inventory counts — right from the tractor cab. The new **Task Scheduler** meets the needs of the dairy manager who wants to set direction for the feeder. Now you can schedule your feeders entire day from what time to mix a batch, to which pens get fed first. You can even include other tasks such as weighing inventory and taking forage moistures. The FS»Touch can notify the manager by texting their phone if there's a delay in the schedule they've set up! Wirelessly transfer data on your farm's Wi-Fi connection or use a portable USB data stick for a low cost data transfer solution. Touch screen technology opens up unlimited potential to Feed Supervisor[®] Software. Call for more information on how to customize your feeding program today!
